

- 1) If God created the earth in 6 days, when did he create dinosaurs? Did dinosaurs exist in the Garden of Eden?
- 2) If dinosaurs existed during man's time, why don't you think there is more mention of them?
- 3) The references to Job, Psalms, and Isaiah – were they references to dinosaurs?
- 4) What do you believe about the Tower of Babel?
- 5) Evolutionists and creationists both believe that human kind started off in one area. Neither believes that humankind as we know it started in more than one place. If that is true, how did man scatter throughout the earth? Even on remote islands? Into remote jungles? How do you explain man's migration throughout the entire world?
- 6) Does that fact that evolutionists and creationists both point to the same point to one point of origin strengthen your faith? Think about it – the writers of the Bible wrote this for a reason. They obviously didn't have any clue as to what scientists were going to think. Was the reason this one point of origin story is true is because God told them that is how humankind started? How else would they have known?

Next week we'll discuss Abraham in more detail.

These questions were used in our Adult Sunday School class.
